[WS-Eventing]

- This is a specification from Microsoft, IBM BEA and Sun to facilitate notifications between two Web Service endpoints.
- The specification can be found at <http://www-128.ibm.com/developerworks/webservices/library/specification/ws-eventing/>
- Leverages the WS-Addressing specification.

[FINS]

- FINS provides complete support for the WS-Eventing specification
- This implementation provides support for a variety of subscription formats.
 - XPath queries
 - Topics
 - Regular Expressions
 - XML Query
- Has been deployed within the OMII 1.2 container.

[FINS – What to watch for]

- We will also be incorporating support for the entire WS-Notification suite of specifications.
- We hope to release a prototype version of this software in Winter 2005.
